

KEEL AGRI

Hydraulic Bale Handler

KEEL AGRI

Our hydraulic bale handler is manufactured to a high standard and benefits from a heavy duty design. It can be adapted to fit any front loader or three point linkage.

Features

- Heavy duty box section steel frame
- High quality painted finish over anti rust primer
- Removable rotating rollers ensure no film damage when clamping
- Genuine Kevernland tines beneath rollers
- Will accept brackets for any type of loader

KEEL AGRI

Heavy duty supported bushing at hinge point with greasing point.

Bolt on stopper allows quick removal of rollers allowing the handler to be used as a bale spike. Genuine Kevernland tines allow two bales to be carried with ease.

An extra wear plate at the bottom of the leg ensures long life.

With easily removable rollers exposing genuine Kevernland tines the KEEL Agri hydraulic bale handler is a versatile tool which can be used year round to handle all your baled silage hay or straw.

The combination of a high strength design and the use of genuine Kevernland tines mean that the hydraulic handler can be opened out to easily accommodate two straw bales.

All our products are ex-stock and can be delivered
